DMED · H2019 · 2026/27

Web and Social Media for Enterprise

Assessment Brief: Furry Friends

Assessment overview

This module is 100% continuous assessment across four parts, all built around one client: Furry Friends. All submissions go to Brightspace by 11:00pm on the due date.

Part	What you submit	Weighting	Due
Part 1 – Labs	Weekly lab work (zipped folder)	**20%**	**Friday** after each lab, before 11:59pm
Part 2 – Web Design Scope Document	One PDF & evidence appendix	**15%**	Thursday 29 October 2026, 11:00pm
Part 3 – Website Development	Zipped site & Git repository link & change log	**35%**	Thursday 26 November 2026, 11:00pm
Part 4 – Social Media Campaign	Campaign report PDF & content files & raw media	**30%**	Thursday 17 December 2026, 11:00pm
Total		**100%**	

Each part has its own instructions below. Nothing is repeated between parts: if a requirement is not listed under a part, it is not assessed in that part.

Every part also includes a short in-person component (a lab sign-off, a desk critique, a code walkthrough or a pitch). These are part of the mark, not optional extras.

Use of generative AI (applies to all four parts)

Generative AI tools (ChatGPT, Copilot, Gemini, Claude, Cursor, v0, Canva Magic tools, AI image generators and similar) may not be used to produce any assessed work in this module. That includes **code**, written analysis, personas, mood boards, images, video, captions and report text.

You may use spell-check and basic grammar correction, and screen readers or other accessibility tools you normally rely on.

How your work is checked. Marks are not based on AI detectors. They are based on evidence that only the person who did the work can produce:

- work you show and explain in labs
- your own photographs, interviews and test results
- version history (Git commits, Moqups and Canva history)
- a short in-person walkthrough or pitch for Parts 3 and 4

If you cannot explain or reproduce work you submitted, the marks for that work cannot be awarded and the submission will be referred under TU Dublin's academic integrity procedures.

Declaration – include this, signed, on the first page of every submission

"I confirm that this work is my own. I did not use generative AI to produce any part of it. All sources, stock images and participants are credited."

Unsure whether a tool is allowed? Ask before you use it, not after.

Creative brief: Furry Friends

Furry Friends Training and Care is a dog training/care and cat care centre in Co. Wicklow. It has been in business for 25 years and holds a five-star Google rating from 1,200 reviews. This brief is the client context for Parts 2, 3 and 4.

What Furry Friends offers

- **Dog training:** good-behaviour classes, socialisation with other dogs, and rehabilitation for dogs from traumatic backgrounds.
- **Cat care:** a climbing jungle, indoor and outdoor, and cat day care.
- **Doggy day care** for all breeds, with pick-up and drop-off.
- **Grooming and spa** for dogs and cats, including a heated swimming pool for dogs.
- **New** > **the Doggy Hotel:** heated private rooms for dogs and cats for overnight and weekend stays.

What the client wants

1. More bookings for grooming and spa, training, and the new Doggy Hotel.
2. More brand awareness, and more traffic to its social media channels.

What the client wants people to find online

- All services, with a clear breakdown of fees.
- The new Doggy Hotel and its heated private rooms.
- Testimonials from happy customers.
- Tips on encouraging good behaviour in dogs and cats at home.

Your client update card

In your lab in the week of 12 October you will draw a **client update card**. It adds one real-world change to the brief, for example a new location, a new service, a target audience shift or a seasonal promotion. Your card is unique to you and is recorded against your name.

> Your card must show up in your scope document, your website and your social media campaign. Work that ignores your card, or uses someone else's, loses the marks for meeting the brief.

Part 1 – Labs

20%

Labs build the skills you need for Parts 2 to 4. Each lab carries an equal share of the 20%, and every lab by what you submit, you may be asked to explain your code in the following lab each week.

What to do each week

1. Download that week's lab instructions and starter files from Brightspace.
2. Work through the lab during your timetabled session.
3. Complete the **in-lab checkpoint** named in the instructions and show it to your lecturer before the session ends. Your lecturer will sign it off on the class list.
4. Finish the remaining tasks outside class.

How labs are marked

Component	Share of each lab's mark	How it's earned
checkpoint	50%	Shown working, in person, during the lab, and you answer one question about it
Completed lab	50%	All tasks complete in the zipped submission

A submission with no signed-off checkpoint can earn at most half marks for that lab. If you miss a lab for a documented reason, arrange a catch-up sign-off with your lecturer within one week.

Rules specific to labs

- Lab work uses the weekly starter files. It is practice work, **not your Furry Friends website.**
- Write every line of lab code yourself. Do not paste code from AI tools or the internet.

Submission

Upload each completed lab as one zipped folder to Brightspace by **11:59pm on the Friday after the lab**. Name it `Surname_Firstname_LabX.zip`.

Part 2 – Web Design Scope Document

15%

Plan the Furry Friends website before you build it. Your plan must be grounded in research you carry out yourself: real competitor sites you test, real pet owners you interview, and photos you take.

2.1 Aims and objectives

Restate the client's aims in your own words. Turn each into at least one measurable objective (for example, "a visitor can find the Doggy Hotel price in two clicks from the home page"). Include one objective that comes from your client update card.

2.2 Competitive analysis

Choose **three real pet care businesses in Ireland**. At least one must be in Co. Wicklow. For each one:

1. Take your own screenshots on a desktop and on **your own phone**. The date or phone status bar must be visible.
2. Carry out one task yourself: find the price of a service and get as far as the booking step without paying. Record how many clicks or taps it took and anything that slowed you down.
3. Analyse the site under these headings:
    - **Visual design:** colour, typography, layout patterns.
    - **Content design:** what content is there, and how clear the calls to action are.
    - **Technical features:** responsiveness, interactive elements, rich media.
    - **Overall effectiveness:** what you think the site's goals are, and whether your task result suggests it meets them.

Finish with a short comparison: what Furry Friends should copy, and what it should avoid.

2.3 Audience research and personas

1. Interview **two real pet owners** for 15 to 20 minutes each. They cannot be students on this module. Use the interview guide and consent form on Brightspace.
2. Keep your raw notes: photos of handwritten notes, or a typed transcript extract. These go in the appendix.
3. Create **one primary and one secondary persona**. Each must cover:
    - **Demographics:** age, location, occupation.
    - **Behaviours:** what pets they have, what they do with them, the role pets play in their life.
    - **Pain points:** difficulties with grooming, training or care.
4. Tag every persona detail to the interview it came from, for example [P1] or [P2].

Persona images must be your own drawing, an icon, or a photo used with consent. AI-generated faces are not allowed.

2.4 Visual design research

- **Mood board:** at least **six photos you took yourself** (pets, textures, the Wicklow setting, signage). Stock images may be added if credited.
- **Colour:** build the palette from your own photos. Give hex codes, name an accent colour for links and buttons, and show a contrast check proving text and buttons meet WCAG AA.
- **Typography:** set a type scale in rem for h1 to h6, body text and small text. Compare one web-safe font with one embedded web font, and include a screenshot of each tested on your phone.

2.5 Sketches and site map

- In your lab in the week of 22nd October, sketch **six quick layouts for the home page** on paper. Photograph them and say which one you developed and why.
- Draw your site map by hand first and photograph it. Then present the final site map as a diagram showing every page and the content on each. Your client update card must appear in it.

2.6 Wireframes

Create low-fidelity wireframes in Moqups for **every page in your site map**, desktop and mobile. Show layout and elements, not final visuals. Include screenshots and a view link to the Moqups project.

2.7 Mock-ups

Create high-fidelity mock-ups in Canva for **two pages**, each in desktop and mobile view (four mock-ups in total). Include screenshots of the mock-ups and a screenshot of the Canva version history. Canva's AI features (Magic Design, Magic Write, Magic Media, Dream Lab) are not allowed.

Designs may change during development. That is expected.

2.8 Design decision log

Keep a dated log of your design decisions while you work: at least **six entries on at least three different dates**. Each entry says what you decided, what evidence led to it (an interview, a competitor task, a test on your phone), and what you rejected.

Desk critique (in person)

In your lab in the week of 22 October, bring your interview notes, home page sketches and mood board in progress. You will talk your lecturer through them for five minutes. This is signed off and counts towards your mark.

How Part 2 is weighted

Section	Marks
2.1 Aims and objectives	5
2.2 Competitive analysis	15
2.3 Audience research and personas	20
2.4 Visual design research	15
2.5 Sketches and site map	10
2.6 Wireframes	15
2.7 Mock-ups	10
2.8 Decision log and desk critique	10
Total	**100**

The full rubric is on Brightspace.

Submission

Upload **one PDF** to Brightspace by **11:00pm on Thursday 29 October 2026**. Keep written analysis up to 1,500 max words, not counting the appendix. The appendix holds your raw interview notes, signed consent forms, and original photos of sketches and the hand-drawn site map.

Part 3 – Website Development

35%

Build the Furry Friends website from scratch, following your own Part 2 plan. Its structure should match your site map, and its layouts your wireframes and mock-ups.

3.1 Technical requirements

1. At least **8 pages** of content.
2. A Bootstrap 5 drop-down menu with at least **two sub-menu items** that link to working sub-pages.
3. At least one page with a **two-column** layout and at least one with a **three-column** layout.
4. A Bootstrap **image gallery**.
5. A booking or enquiry **form** with client-side validation and at least two micro-interactions, for example focus states, inline error messages or a success message.
6. **Fully responsive** for mobile and desktop, using at least two media queries you write in your own stylesheet.
7. A **fixed** navigation bar or footer with links to social media.
8. **Error-free HTML and CSS**, proven with W3C validator screenshots for every page and stylesheet.
9. Your Part 2 colour palette and type scale set as **CSS custom properties** (variables) and used throughout.
10. Content for your **client update card** on at least one page.
11. **Alt text** on every image.

3.2 Images

At least **two images on the site must be photos you took yourself**. Stock images may be used for the rest; credit them on a credits page or in the footer.

3.3 What is not allowed

- HTML or CSS templates, themes, or Bootstrap example pages.
- Website builders (Wix, Squarespace, WordPress page builders and similar).
- AI-generated or AI-completed code. Turn off GitHub Copilot and any AI autocomplete in your editor.

Short snippets from official documentation, such as Bootstrap component markup, are allowed. Credit each one in a code comment.

3.4 Process evidence

- **Git history:** use the GitHub Classroom repository set up for you. Make at least **12 commits on at least 6 different days** between 2 and 26 November. Each commit message must say what changed.
- **Build checkpoints**, signed off in lab:
  - Week of 9 November: home page, navigation and mobile layout working.
  - Week of 16 November: gallery and form working.
- **Change log:** a one-page PDF listing where your build differs from your wireframes and mock-ups, and why.

3.5 Code walkthrough (in person)

In your lab in the week of 30 November you will have a 10-minute walkthrough with your lecturer. You will:

1. Show your site running on a desktop and on your phone.
2. Explain two sections of code that your lecturer chooses.
3. Make one small change your lecturer asks for, for example changing the number of gallery columns on mobile or adding a validated field to the form. You may use the Bootstrap documentation, but not AI tools or other websites.

The walkthrough confirms your code marks. If you cannot explain or change your own code, the code marks cannot be awarded.

How Part 3 is weighted

Area	Marks
Technical requirements (3.1)	35
Design quality and match to your Part 2 plan	15
Content: meets the brief and your client update card	10
Responsiveness and accessibility	10
Process evidence: Git history, checkpoints, change log	10
Code walkthrough	20
Total	**100**

The full rubric is on Brightspace.

Submission

By **11:00pm on Thursday 26 November 2026**, upload to Brightspace:

- your website as one zipped folder, with `index.html` at the top level and validator screenshots in a folder called `evidence`
- your change log PDF
- your GitHub repository link, in the submission text box

Part 4 – Social Media Campaign

30%

To be added
